

MAYEKAWA HORIZONTAL AIR FLOW CURTAIN

THERMO SHUTTER

THE THERMO SHUTTER

is a new horizontal air curtain developed by MAYEKAWA for cold rooms, industrial freezers and coolers.

With conventional air curtains, cooling air flowed out from only one direction, and the edge of the air curtain became weak.

The air flow pattern of the Thermo Shutter is horizontal and from both sides, so the pressure is the same around the entire threshold resulting in a more effective barrier.

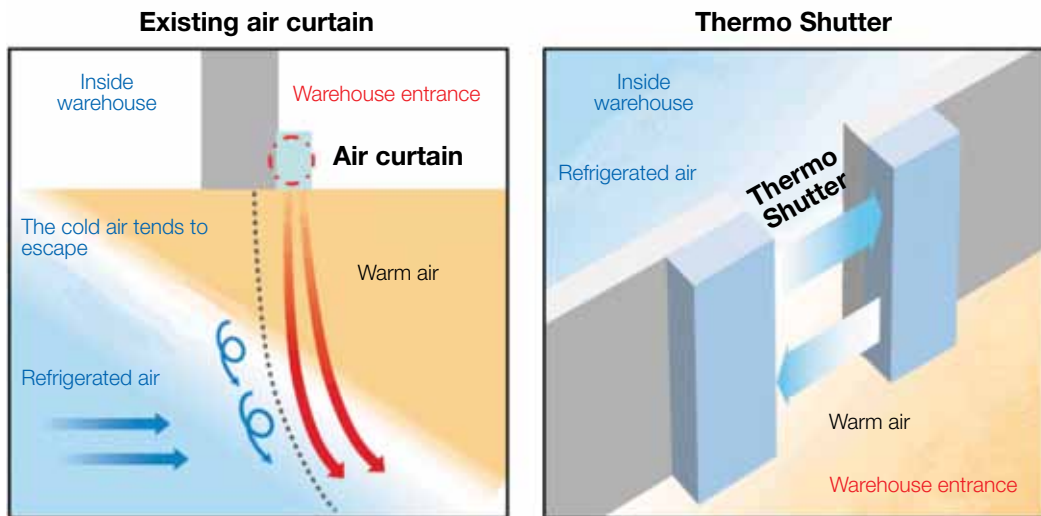

Installing the Thermo shutter saves energy, improves the quality of stored products, is hygienic and reduces investment on new equipment.

Benefit

- Energy saving
- Reduction of defrosting operation
- Keeping good quality of storage equipments
- Safety operation – prevention of floor frozen
